

## REPORT

## CD NO.

10401

DATE DISTR. 3 May 1954

NO. OF PAGES 9

NO. OF ENCLS.  
(LISTED BELOW)

SUPPLEMENT TO  
REPORT NO.

THIS IS UNEVALUATED INFORMATION

25X1

Cadmium sulphide

25X1

~~SECRET CONTROL~~  
~~U. S. OFFICIALS ONLY~~

- 2 -

25X1

Chemical

Welding powder Autogal-Firmit\*<sup>7</sup>

Standofix\* wire lacquer

Dry mat caustic powder

Crystalline zinc chloride, anhydrous

Sodium perchlorate, tech.

Miscellaneous chemicals

Quinoline  
m-Toluidine  
o-Toluidine  
Nitroaniline  
p-Toluidine

Carbon black (from oil), calcined

Lead acetate

White and brown

Mercur

Raschit\*

Calcium ferrocyanide

Carbonaffin\* (active carbon)

Iron II (ferrous) oxalate<sup>10</sup>

American carbon black

Alpha-methylnaphthalene

Potassium thiocyanate

Calcium chips

Copper

o-Toluidine, technical grade

Autogal I\*<sup>11</sup>

Stabilizer I

Tamol NNO\*

Thiocarbamilid<sup>12</sup>

Trolitul\* (qualities V, VI)<sup>13</sup>

Phenylurethane

Phosphorus tribromide, pure or technical grade

25X1

- 3 -

1  
BB\*14  
polishing abrasive<sup>15</sup>  
gallol, cryst. DAB<sup>16</sup>  
lapping compound "MK"  
sulphate  
phosphate tech.  
m-Nit  
Minorite\* black  
2-Naphthol-3, 6-disulfonic acid<sup>18</sup>  
Sodium bichromate  
Cadmium carbonate, tech.  
Cadmium carbonate or sulphide  
Calcium nitrate, tech.  
Fesa I \*, dinitroaniline  
Diphenylamine, tech.  
Uranyl acetate, crystal  
Fesa I \*  
Fesa II \*  
Furfurol  
Allyl alcohol  
Barium chlorate, tech.  
Barium oxide, tech.  
Barium selenite  
Benzidine, tech.  
Benzyl peroxide<sup>19</sup>  
p-Toluidine, tech.  
Thiourea  
Potassium cyanide  
Potassium nitrate, tech. Na-free  
Katanol CD \*  
carbonate, tech.

- 4 -

25X1

Chemical

[REDACTED] oride, tech.

Cobalt violet<sup>20</sup>

Potassium pyrosulphate

Catechu<sup>21</sup>

Adhesive

Synthetic resin special lacquer B4<sup>20</sup>

Lapping paste K4W<sup>22</sup>

Ethylenediamine, pure conc.

Astralon \* foil (or sheet) 80x160 cm. x .25 mm.<sup>23</sup>

Boron carbide

Boron carbide

Carnauba wax

Cellon \* strip, water clear 540x40x.5<sup>24</sup>

Cellon \* sheets, glass clear 74x40x.5

Cellon \* 60x140 cm. x 1.5 cm.

25X1

Cerium nitrate

Cerium oxalate

Potassium mercuricyanide<sup>25</sup>

Dekorit V No. 300a \*<sup>26</sup>

Dimethylaniline, tech.

Iron ammonium oxalate, tech.

Filtragol\*

Firinit Supra\*, welding flux

Freon F12 \*<sup>27</sup>

Freon F12 \* CF<sub>2</sub>Cl<sub>2</sub>

Freon F12

Carbon black CK<sub>3</sub> from gas

Corodol \* caustic solution ("green acid")

Various photographic papers and films

- 5 -

25X1

Chemical

Megum \* chlorinated rubber-Pepren

Methyl glycol acetate (GMC)

Flexiglas \* 58 and 97 mm. dia.<sup>28</sup>

Silver polish thinning oil

Mercury II [REDACTED] [REDACTED]

Raschit-W \* (a-[REDACTED]methyl)<sup>29</sup>

Screen drying plate emulsion (Rastertrockenplattenemulsion)

Thorium nitrate

Thiourea, tech. pure

Mastic cement

VP 1527 \*

Teroson \* fluid

Testalin \*

Vulkazit 576 \*

Vulkazit P and 774 \*

Zinc amalgam

Sodium citrate, pure

Dimethylaniline, tech.

Sodium perborate with minimum 10% active oxygen

Saponin

Sodium selenite

Antimony sulphide

Alutinol \* soldering paste

Autogal N \* welding powder

Autogal C \* welding powder

Autogal A \* welding powder

Firinit Supra 21 \* welding powder

Hydrogal \* welding powder

25X1

- 6 -

25X1

Chemical

Stabilizer I \*

Strontium nitrate, purest grade

Strontium oxalate, natural

Terra di Sienna, Italian<sup>30</sup>

Terra di Sienna burnt, Italian<sup>31</sup>

Umbra, natural cyprus<sup>32</sup>

Vinnol H4O or HH4O \*<sup>33</sup>

Ammonium vanadate<sup>34</sup>

~~T. H. [REDACTED] [REDACTED]~~

Sodium chromate  $\text{Na}_2\text{CrO}_4 \cdot 10\text{H}_2\text{O}$

Sodium selenite

Neodymium oxide, chem. pure

Plastadur \* molding compound

Flexiglas \* 900x600 mm.

Flexiglas \*, polished, water clear

25X1

Porofor \*

Porofor BSH \*

Praseodymium

Quartz burner, mixture Ar/Kr/He<sup>35</sup>

Mercury II, ~~[REDACTED] [REDACTED] [REDACTED]~~

Copper welding paste, Lekupa \*

Lekupa \*

Phosphors<sup>36</sup>

Photoengraving gelatine, various grades

Luvikan \* sheets, 8 mm. thick<sup>37</sup>

Burnt magnesium<sup>38</sup>

Magnesium carbonate, heavy

Magnesium powder

Magnesium, "Skoiza" quality

Blankophor \*<sup>39</sup>

Cadmopurrot \* bright

- 7 -

25X1

Chemical

Calcium phosphide, tech.

Calcium phosphide, tech.

Cellon \* sheets

Hydrogen chloride gas

Cobalt blue, genuine<sup>40</sup>

Desmodur R \*<sup>41</sup>

Iron mica<sup>42</sup>

Iron

Iron sulphate, tech. crystal

Ivory black, shade black<sup>43</sup>

Bohemian green earth<sup>44</sup>

Helio-fast violet<sup>45</sup>

Indigo, BASE<sup>46</sup>

Ethyl

25X1

Ethyl cellulose

Aluminum oxide, type VI

Aluminum oxide, type VI

Ammonium vanadate

Astralon \* foil<sup>47</sup>

Astralon \* 100x200 cm.x.25 mm.  
80x150 cm.x.20 mm.

Astralon \*

Atrament \* oil<sup>48</sup>

Barium chlorate

Sumatra gum benzoin

Benzyl cellulose 900

Cadmium sulphide (yellow); pure, bright

Cadmium sulphide Orange R, pure

Cadmium sulphide Orange 5R

- 8 -

25X1

Chemical

Cadmium Sulphide Lemon S3328, pure

Cadmium selenide (red) pure bright S3378

Potassium perchlorate

25X1

Potassium perchlorate

Carpathian ash

Freon F22 #49

Comments:

25X1

1. Probably for use in flares.
2. Probably for flares, pyrotechnics or thermite.
3. Probably a cryolite type of material.
4. A catalyst invented by Alfred Reppe of the Badische Anilin und Sodafabrik (BASF) in Ludwigshafen, West Germany.
5. A polymethacrylate plastic.
6. Deutsches Arzneimittel Buch, 6th edition.
7. Flux for welding.
8. Corrosive sublimate.
9. p-chloro-m-cresol.
10. Probably a raw material for powdered iron for inductor cores.
11. Probably another form of welding flux.
12. Sulphocarbanilide--org. syn.; pharm.
13. Polystyrene plastics.
14. A polyacrylate plastic.
15. Jeweler's rouge.
16. Cf. Field Comment 6 above.
17. It is not known whether this is a trade name or ~~what~~ type of chemical. ~~it is~~.
18. "R acid"--a dye intermediate.
19. Probably benzoyl peroxide.
20. Cobalt II ammonium phosphate.
21. A natural pigment and tanning agent.
22. An abrasive for finishing.
23. A polyvinyl chloride plastic.
24. A cellulose acetate product.

25X1

Comments: (cont.)

25X1

25. For silvering ~~of~~ mirrors
26. A molding resin.
27. Dichlorodifluoromethane refrigerant.
28. A polymethacrylate plastic.
29. For rubber compounding, disinfectant.
30. A pigment, ocher.
31. A pigment, burnt ocher.
32. A pigment.
33. A commercial polyvinyl chloride.
34. Probably for preparation of catalysts.
35. An inert gas mixture for burner used in quartz working.
36. Probably for fluorescent tubes or cathode ray tubes.
37. Polyvinyl carbazole.
38. An ignited magnesium oxide, probably for refractory purposes.
39. Trade name for product of Farbenfabriken Bayer, Leverkusen. Probably a white pigment.
40. A very durable blue pigment.
41. A poly-isocyanate plastic.
42. A hematite.
43. A paint pigment for artists.
44. A natural mixed silicate mineral pigment (hornblend).
45. A class of dyes—violet. A Bayer product.
46. A standard dye. Produced by BASF, Ludwigshafen. Probably for the preparation of catalysts.
47. A polyvinyl chloride plastic.
48. Oil for an anti-corrosion agent.
49. A monochlorodifluoromethane refrigerant.
